

TPS73HD301, TPS73HD318, TPS73HD325 DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

SLVS167C – SEPTEMBER 1998 – REVISED – MAY 1999

- Dual Output Voltages for Split-Supply Applications
- 3.3-V/Adjustable Output, 3.3 V/1.8 V, and 3.3 V/2.5
- Dropout Voltage < 80 mV Max at $I_O = 100$ mA (3.3-V option)
- Low Quiescent Current, Independent of Load . . . 340 μ A Typ Per Regulator
- Ultra-Low-Current Sleep State . . . 2 μ A Max
- Dual Active-Low Reset Signals with 200-ms Pulse Width
- Output Current Range of 0 mA to 750 mA Per Regulator
- 28-Pin PowerPAD™ TSSOP Package

description

NC – No internal connection

The TPS73HD3xx family of dual voltage regulators offers very low dropout voltages and dual outputs in a compact package. Designed primarily for DSP applications, these devices can be used in any mixed-output voltage application with each regulator supporting up to 750 mA. Output current can be allocated as desired between the two regulators and used to power many of today's DSPs. Low quiescent current and very low dropout voltage assure maximum power usage in battery-powered applications. Texas Instruments PowerPAD TSSOP package allows use of these devices with any voltage/current combination within the range of the listed specifications without thermal problems, provided proper device mounting procedures are followed. Separate inputs allow the designer to configure the source power as desired. Dual active-low reset signals allow resetting of core-logic and I/O separately. Remote sense/feedback terminals provide regulation at the load. The TPS73HD3xx are available in 28-pin PowerPAD TSSOP. They operate over a free-air temperature range of -40°C to 125°C.

AVAILABLE OPTIONS

T_A	REGULATOR 1 V_O (V)	REGULATOR 2 V_O (V)	TSSOP (PWP)
-40°C to 125°C	Adj (1.2 – 9.75 V)	3.3 V	TPS73HD301PWPR
	1.8 V	3.3 V	TPS73HD318PWPR
	2.5 V	3.3 V	TPS73HD325PWPR

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PowerPAD is a trademark of Texas Instruments Incorporated.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

SLVS167C – SEPTEMBER 1998 – REVISED – MAY 1999

functional block diagram

OUTPUT VOLTAGE	R1	R2	UNIT
Adjustable	0	∞	Ω
1.8 V	122	233	k Ω
2.5 V	260	233	k Ω
3.3 V	420	233	k Ω

Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
NC	1, 2, 7, 8, 13–16, 20, 21, 26, 27		No connection
1GND	3		Regulator #1 ground
1EN	4	I	Regulator #1 enable, low = enable
1IN	5, 6	I	Regulator #1 input supply voltage
2GND	9		Regulator #2 ground
2EN	10	I	Regulator #2 enable, low = enable
2IN	11, 12	I	Regulator #2 input supply voltage
2OUT	17, 18	O	Regulator #2 output voltage
2SENSE	19	I	Regulator #2 output voltage sense (fixed output)
2RESET	22	O	Regulator #2 reset signal, low = reset
1OUT	23, 24	O	Regulator #1 output voltage
1FB/SENSE	25	I	Regulator #1 output voltage feedback (adjustable output)
1RESET	28	O	Regulator #1 reset signal, low = reset

TPS73HD301, TPS73HD318, TPS73HD325 DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

SLVS167C – SEPTEMBER 1998 – REVISED – MAY 1999

absolute maximum ratings over operating free-air temperature (unless otherwise noted)[†]

Input voltage range, V_I ($\overline{xIN}$, $\overline{xRESET}$, $xSENSE$, $\overline{xEN}$)	–0.3 V to 11 V
Differential input voltage, V_{ID} (1GND to 2GND)	2 V
Output current, I_O (1OUT, 2OUT)	2 A
Continuous total power dissipation	See Dissipation Rating Tables
Operating free-air temperature range, T_A	–40°C to 125°C
Storage temperature range, T_{stg}	–65°C to 150°C
Lead temperature soldering 1,6 mm (1/16 inch) from case for 10 seconds	260°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltages are with respect to GND.

DISSIPATION RATING TABLE 1 – FREE-AIR TEMPERATURES[‡]

PACKAGE	AIR FLOW (CFM)	$T_A < 25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25^\circ\text{C}$	$T_A = 70^\circ\text{C}$ POWER RATING	$T_A = 85^\circ\text{C}$ POWER RATING
PWP [‡]	0	2.9 W	23.5 mW/°C	1.9 W	1.5 W
	300	4.3 W	34.6 mW/°C	2.8 W	2.2 W
PWP [§]	0	3 W	23.8 mW/°C	1.9 W	1.5 W
	300	7.2 W	57.9 mW/°C	4.6 W	3.8 W

[‡] This parameter is measured with the recommended copper heat sink pattern on a 1-layer PCB, 5-in × 5-in PCB, 1 oz. copper, 2-in × 2-in coverage (4 in²).

[§] This parameter is measured with the recommended copper heat sink pattern on a 8-layer PCB, 1.5-in × 2-in PCB, 1 oz. copper with layers 1, 2, 4, 5, 7, and 8 at 5% coverage (0.9 in²) and layers 3 and 6 at 100% coverage (6 in²).

recommended operating conditions

	MIN	MAX	UNIT
Input voltage, V_I [†] Adjustable output (regulator #1)	2.97	10	V
Input voltage, V_I [†] 3.3-V output (regulator #2)	3.97	10	V
High-level input voltage at $\overline{EN}$, V_{IH}	2		V
Low-level input voltage at $\overline{EN}$, V_{IL}		0.5	V
Total output current range (per regulator), I_O	0	750	mA
Operating virtual junction temperature range, T_J	–40	125	°C

[†] Minimum input voltage defined in the recommended operating conditions is the maximum specified output voltage plus dropout voltage, V_{DO} , at the maximum specified load range (750 mA). Since dropout voltage is a function of output current, the usable range can be extended for lighter loads. To calculate the minimum input voltage for the maximum load current used in a given application, use the following equation:

$$V_{I(\min)} = V_{O(\max)} + V_{DO(\max \text{ load})}$$

Because regulator 1 of the TPS73HD301 is programmable, $r_{DS(on)}$ should be used to calculate V_{DO} before applying the above equation. The equation for calculating V_{DO} from $r_{DS(on)}$ is given in Note 3 in the TPS73HD301 electrical characteristics table. The minimum value of 3.5 V is the absolute lower limit for the recommended input voltage range for the TPS73HD301. With 2.97-V input voltage, the LDO may be in dropout and will not meet the 3% regulator output or 750-mA load current specification.

TPS73HD301, TPS73HD318, TPS73HD325

DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

SLVS167C – SEPTEMBER 1998 – REVISED – MAY 1999

electrical characteristics, $V_{I(IN)} = 4.3\text{ V}$, $I_O = 10\text{ mA}$, $\overline{EN} = 0\text{ V}$, $C_O = 4.7\text{ }\mu\text{F/CSR}^\ddagger = 1\text{ }\Omega$,
SENSE/FB shorted to OUT (unless otherwise noted)

PARAMETER	TEST CONDITIONS [§]	T _J	MIN	TYP	MAX	UNIT
Quiescent current (active mode), each regulator	$\overline{EN} \leq 0.5\text{ V}$, $0\text{ mA} \leq I_O \leq 750\text{ mA}$, See NOTE 2	25°C		340	415	μA
		-40°C to 125°C			550	
I _{CC} Supply current (standby mode), each regulator	$\overline{EN} = V_I$, NOTE 2	25°C		0.01	0.5	μA
		-40°C to 125°C			2	
I _O Output current limit, each regulator	V _O = 0, V _I = 10 V	25°C	0.8	1.2	2	A
		-40°C to 125°C			2	
I _{lkg} Pass-element leakage current (standby mode)	$\overline{EN} = V_I$, See NOTE 2	25°C		0.01	0.5	μA
		-40°C to 125°C			1	
Output voltage temperature coefficient		-40°C to 125°C		61	75	ppm/°C
Thermal shutdown junction temperature				165		°C
Logic high ($\overline{EN}$) (standby mode)	2.5 V ≤ V _I ≤ 6 V, 6 V ≤ V _I ≤ 10 V	-40°C to 125°C	2			V
			2.7			
Logic low ($\overline{EN}$) (active mode)	See NOTE 2	25°C			0.5	V
		-40°C to 125°C			0.5	
V _{hys} Hysteresis voltage ($\overline{EN}$)		25°C		50		mV
I _I Input current ($\overline{EN}$)	0 V ≤ V _I ≤ 10 V	25°C	-0.5	0.001	0.5	μA
		-40°C to 125°C	-0.5		0.5	
Minimum input voltage, for active pass element		25°C		2.05	2.5	V
		-40°C to 125°C			2.5	
Minimum input voltage, for valid $\overline{RESET}$	I _{O(RESET)} = -300 μA	25°C		1	1.5	V
		-40°C to 125°C			1.9	

[‡] CSR (compensation series resistance) refers to the total series resistance, including the equivalent series resistance (ESR) of the capacitor, any series resistance added externally, and PWB trace resistance to C_O.

[§] Pulse-testing techniques are used to maintain virtual junction temperature as close as possible to ambient temperature; thermal effects must be taken into account separately.

NOTE 2: Minimum input voltage is 3.5V or V_O(typ) + 1V whichever is greater.

The minimum value of 3.5 V is the absolute lower limit for the recommended input voltage range for the TPS73HD301.

		–40°C to 125°C			0.4	
I _I Input current (1FB)		25°C	–10	0.1	10	nA
		–40°C to 125°C	–20		20	

[†] CSR (compensation series resistance) refers to the total series resistance, including the equivalent series resistance (ESR) of the capacitor, any series resistance added externally, and PWB trace resistance to C_L.

[‡] Pulse-testing techniques are used to maintain virtual junction temperature as close as possible to ambient temperature; thermal effects must be taken into account separately.

[§] Output voltage programmed to 2.5 V with closed-loop configuration (see application information)

NOTE 3: To calculate dropout voltage, use equation:

$$V_{DO} = I_O \times r_{DS(ON)}$$

r_{DS(ON)} is a function of both output current and input voltage. This parametric table lists r_{DS(ON)} for V_I = 3.9 V and 5.9 V, which corresponds to dropout conditions for programmed output voltages of 4 V and 6 V respectively. For other programmed values, refer to Figure 29.

THERMAL INFORMATION

The TPS73HD3xx is packaged in a high-power dissipation downset lead frame for optimal power handling. With proper heat dissipation techniques, the full power output of these devices can be safely handled over the full temperature range. The Texas Instruments technical brief, *PowerPAD Thermally Enhanced Package* (literature number SLMA002), goes into considerable detail into techniques for properly mounting this type of package for maximum thermal performance. A thermal conduction plane of approximately 3" x 3" will give a power dissipation level of 4.5 W.

Power dissipation within the device can be calculated with the following equation:

$$P_D = P_{IN} - P_{OUT} = V_I(I_{O1} + I_{O2}) - (V_{O1} \times I_{O1} + V_{O2} \times I_{O2})$$

TPS73HD301, TPS73HD318, TPS73HD325 DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

thermal considerations

DISSIPATION RATING TABLE

PACKAGE	AIR FLOW (CFM)	T _A < 25°C POWER RATING	DERATING FACTOR ABOVE T _A = 25°C	T _A = 70°C POWER RATING	T _A = 85°C POWER RATING
PWP†	0	2.9 W	23.5 mW/°C	1.9 W	1.5 W
	300	4.3 W	34.6 mW/°C	2.8 W	2.2 W
PWP‡	0	3 W	23.8 mW/°C	1.9 W	1.5 W
	300	7.2 W	57.9 mW/°C	4.6 W	3.8 W

† This parameter is measured with the recommended copper heat sink pattern on a 1-layer PCB, 5-in × 5-in PCB, 1 oz. copper, 2-in × 2-in coverage (4 in²).

‡ This parameter is measured with the recommended copper heat sink pattern on an 8-layer PCB, 1.5-in × 2-in PCB, 1 oz. copper with layers 1, 2, 4, 5, 7, and 8 at 5% coverage (0.9 in²) and layers 3 and 6 at 100% coverage (6 in²).

The maximum ambient temperature depends on the heatsinking ability of the PCB system. Using the 0 CFM and 300 CFM data from the dissipation rating table, the derating factor for the PWP package with 6.9 in² of copper area on a multilayer PCB is 24 mW/°C and 58 mW/°C respectively. Converting this to Θ_{JA} :

$$\Theta_{JA} = \frac{1}{\text{Derating}}$$

For 0 CFM :

$$\begin{aligned} &= \frac{1}{0.0235} \\ &= 42.6^\circ\text{C/W} \end{aligned}$$

For 300 CFM :

$$\begin{aligned} &= \frac{1}{0.0579} \\ &= 17.3^\circ\text{C/W} \end{aligned}$$

Given Θ_{JA} , the maximum allowable junction temperature, and the total internal dissipation, the maximum ambient temperature can be calculated with the following equation. The maximum recommended junction temperature for the TPS73HD3xx is 150 °C.

$$T_{A \text{ Max}} = T_{J \text{ Max}} - (\Theta_{JA} \times P_D)$$

The maximum power dissipation limit is determined using the following equation:

$$T_{D(\text{max})} = \frac{T_{J \text{ max}} - T_A}{R_{\Theta JA}}$$

Where:

$T_{J \text{ max}}$ is the maximum allowable junction temperature

$R_{\Theta JA}$ is the thermal resistance junction-to-free-air for the package (i.e., 285°C/W for the 5-terminal SOT-23 package).

T_A is the free-air temperature

The regulator dissipation is calculated using:

$$P_D = (V_I - V_O) \times I_O$$

Power dissipation resulting from quiescent current is negligible.

TPS73HD301, TPS73HD318, TPS73HD325 DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

SLVS167C – SEPTEMBER 1998 – REVISED – MAY 1999

APPLICATION INFORMATION

Capitalizing upon the features of the TPS73xx family (low-dropout voltage, low quiescent current, power-saving shutdown mode, and a supply-voltage supervisor) and the power-dissipation properties of the TSSOP PowerPAD package has enabled the integration of the TPS73HD3xx dual LDO regulator with high output current for use in DSP and other multiple voltage applications. Figure 35 shows a typical dual-voltage DSP application.

Figure 33. Dual-Voltage DSP Application

DSP power requirements include very high transient currents that must be considered in the initial design. This design uses higher-valued output capacitors to handle the large transient currents. Details of this type of design are shown in the application report, *Designing Power Supplies for TMS320VC549 DSP Systems*.

minimum load requirements

The TPS73HD3xx is stable even at zero load; no minimum load is required for operation.

TPS73HD301, TPS73HD318, TPS73HD325

DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

SLVS167C – SEPTEMBER 1998 – REVISED – MAY 1999

APPLICATION INFORMATION

SENSE connection

The SENSE terminal of fixed-output devices must be connected to the regulator output for proper functioning of the regulator. Normally, this connection should be as short as possible; however, the connection can be made near a critical circuit (remote sense) to improve performance at that point. Internally, SENSE connects to a high-impedance wide-bandwidth amplifier through a resistor-divider network, and noise pickup feeds through to the regulator output. It is essential to route the SENSE connection in such a way as to minimize/avoid noise pickup. Adding an RC network between SENSE and OUT to filter noise is not recommended because it can cause the regulator to oscillate.

external capacitor requirements

An input capacitor is not required; however, a ceramic bypass capacitor (0.047 pF to 0.1 μ F) improves load transient response and noise rejection when the TPS73HD3xx is located more than a few inches from the power supply. A higher-capacitance electrolytic capacitor may be necessary if large (hundreds of milliamps) load transients with fast rise times are anticipated.

As with most LDO regulators, the TPS73HD3xx requires an output capacitor for stability. A low-ESR 10- μ F solid-tantalum capacitor connected from the regulator output to ground is sufficient to ensure stability over the full load range (see Figure 44). Adding high-frequency ceramic or film capacitors (such as power-supply bypass capacitors for digital or analog ICs) can cause the regulator to become unstable unless the ESR of the tantalum capacitor is less than 1.2 Ω over temperature. Capacitors with published ESR specifications such as the AVX TPSD106M035R0300 and the Sprague 593D106X0035D2W work well because the maximum ESR at 25°C is 300 m Ω (typically, the ESR in solid-tantalum capacitors increases by a factor of 2 or less when the temperature drops from 25°C to -40°C). Where component height and/or mounting area is a problem, physically smaller, 10- μ F devices can be screened for ESR. Figures 23 through 28 show the stable regions of operation using different values of output capacitance with various values of ceramic load capacitance.

Due to the reduced stability range available when using output capacitors smaller than 10 μ F, capacitors in this range are not recommended. Larger capacitors provide a wider range of stability and better load transient response. Because capacitor minimum ESR is seldom if ever specified, it may be necessary to add a 0.5- Ω to 1- Ω resistor in series with the capacitor and limit ESR to 1.5 Ω maximum. As shown in the CSR graphs (Figures 23 through 28), minimum ESR is not a problem when using 10- μ F or larger output capacitors.

Below is a partial listing of surface-mount capacitors usable with the TPS73HD3xx. This information, along with the CSR graphs, is included to assist in selection of suitable capacitance for the user's application. When necessary to achieve low height requirements along with high output current and/or high ceramic load capacitance, several higher ESR capacitors can be used in parallel to meet the guidelines above.

DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

SLVS167C – SEPTEMBER 1998 – REVISED – MAY 1999

APPLICATION INFORMATION

programming the adjustable LDO regulator output

Programming the adjustable regulator is done using an external resistor divider as shown in Figure 44. The equation governing the output voltage is:

$$V_O = V_{ref} \times \left(1 + \frac{R1}{R2}\right)$$

Where

V_{ref} = reference voltage, 1.182 V typ

Resistors R1 and R2 should be chosen for approximately 7-μA divider current. A recommended value for R2 is 169 kΩ with R1 adjusted for the desired output voltage. Smaller resistors can be used, but offer no inherent advantage and consume more power. Larger values of R1 and R2 should be avoided as leakage currents at FB will introduce an error. Solving for R1 yields a more useful equation for choosing the appropriate resistance:

$$R1 = \left(\frac{V_O}{V_{ref}} - 1\right) \times R2$$

OUTPUT VOLTAGE
PROGRAMMING GUIDE

OUTPUT VOLTAGE	RESET VOLTAGE	R1	R2	UNIT

† Non-operational below 1.9 V

Figure 34. TPS7301 Adjustable LDO Regulator Programming

APPLICATION INFORMATION

undervoltage supervisor function

The $\overline{\text{RESET}}$ outputs of the TPS73HD3xx initiate a reset in microcomputer and microprocessor systems in the event of an undervoltage condition. An internal comparator in the TPS73HD3xx monitors the output voltage of the regulator to detect the undervoltage condition. When that occurs, the $\overline{\text{RESET}}$ output transistor turns on, taking the $\overline{\text{RESET}}$ signal low.

At programmed output voltages below 1.9 V (on the adjustable regulator only) and on the 1.8 V regulator the reset function becomes unusable. With a minimum output voltage requirement for a valid $\overline{\text{RESET}}$ signal (over temperature) being 1.9 V, $\overline{\text{RESET}}$ will not operate reliably in this range.

On power up, the output voltage tracks the input voltage. The $\overline{\text{RESET}}$ output becomes active (low) as V_I approaches the minimum required for a valid $\overline{\text{RESET}}$ signal (specified at 1.5 V for 25°C and 1.9 V over full recommended operating temperature range). When the output voltage reaches the appropriate positive-going input threshold (V_{IT+}), a 200-ms (typical) timeout period begins during which the $\overline{\text{RESET}}$ output remains low. Once the timeout has expired, the $\overline{\text{RESET}}$ output becomes inactive. Since the $\overline{\text{RESET}}$ output is an open-drain NMOS, a pullup resistor should be used to ensure that a logic-high signal is indicated.

The supply-voltage-supervisor function is also activated during power down. As the input voltage decays and after the dropout voltage is reached, the output voltage tracks linearly with the decaying input voltage. When the output voltage drops below the specified negative-going input threshold (V_{IT-} — see electrical characteristics tables), the $\overline{\text{RESET}}$ output becomes active (low). It is important to note that if the input voltage decays below the minimum required for a valid $\overline{\text{RESET}}$, the $\overline{\text{RESET}}$ is undefined.

Since the circuit is monitoring the regulator output voltage, the $\overline{\text{RESET}}$ output can also be triggered by disabling the regulator or by any fault condition that causes the output to drop below V_{IT-} . Examples of fault conditions include a short circuit on the output and a low input voltage. Once the output voltage is reestablished, either by reenabling the regulator or removing the fault condition, then the internal timer is initiated, which holds the $\overline{\text{RESET}}$ signal active during the 200-ms (typical) timeout period.

Transient loads or line pulses can also cause a reset to occur if proper care is not taken in selecting the input and output capacitors. Load transients that are faster than 5 μs can cause a reset if high-ESR output capacitors (greater than approximately 7 Ω) are used. A 1- μs transient causes a reset when using an output capacitor with greater than 3.5 Ω of ESR. Note that the output-voltage spike during the transient can drop well below the reset threshold and still not trip if the transient duration is short. A 1- μs transient must drop at least 500 mV below the threshold before tripping the reset circuit. A 2- μs transient trips $\overline{\text{RESET}}$ at just 400 mV below the threshold. Lower-ESR output capacitors help by reducing the drop in output voltage during a transient and should be used when fast transients are expected.

NOTE:

$$V_{IT+} = V_{IT-} + \text{Hysteresis}$$

output noise

The TPS73HD3xx has very low output noise, with a spectral noise density $< 2 \mu\text{V}/\sqrt{\text{Hz}}$. This is important when noise-susceptible systems, such as audio amplifiers, are powered by the regulator.

TPS73HD301, TPS73HD318, TPS73HD325

DUAL-OUTPUT LOW-DROPOUT VOLTAGE REGULATORS

SLVS167C – SEPTEMBER 1998 – REVISED – MAY 1999

APPLICATION INFORMATION

regulator protection

The TPS73HD3xx PMOS-pass transistors have built-in back diodes that safely conduct reverse currents when the input voltage drops below the output voltage (e.g., during power down). Current is conducted from the output to the input and is not internally limited. If extended reverse voltage is anticipated, external limiting might be appropriate.

The TPS73HD3xx also features internal current limiting and thermal protection. During normal operation, the TPS73HD3xx limits output current to approximately 1 A. When current limiting engages, the output voltage scales back linearly until the overcurrent condition ends. While current limiting is designed to prevent gross device failure, care should be taken not to exceed the power dissipation ratings of the package. If the temperature of the device exceeds 165°C, thermal-protection circuitry shuts it down. Once the device has cooled, regulator operation resumes.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

THERMAL INFORMATION

This PowerPAD™ package incorporates an exposed thermal pad that is designed to be attached to a printed circuit board (PCB). The thermal pad must be soldered directly to the PCB. After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For additional information on the PowerPAD package and how to take advantage of its heat dissipating abilities, refer to Technical Brief, PowerPAD Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 and Application Brief, PowerPAD Made Easy, Texas Instruments Literature No. SLMA004. Both documents are available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

PowerPAD™ PLASTIC SMALL OUTLINE

NOTES:

- All linear dimensions are in millimeters.
- This drawing is subject to change without notice.
- Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
- This package is designed to be soldered to a thermal pad on the board. Refer to Technical Brief, PowerPad Thermally Enhanced Package, Texas Instruments Literature No. SLMA002, SLMA004, and also the Product Data Sheets.
- For specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>. Publication IPC-7351 is recommended for alternate designs. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil design.
- Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale (www.ti.com/legal/termsofsale.html) or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
