

## 具有三态输出的 SNx4AHCT240 八通道反相缓冲器/驱动器

### 1 特性

- 输入与 TTL 电压兼容
- 闩锁性能超过 JESD 17 所规定的 250mA
- 对于符合 MIL-PRF-38535 标准的产品，所有参数均经过测试，除非另外注明。对于所有其他产品，生产流程不一定包含对所有参数的测试。

### 2 应用

- 网络交换机
- 医疗和健身
- 电视
- 电力基础设施

### 3 说明

SNx4AHCT240 八通道缓冲器/驱动器设计用于提高三态存储器地址驱动器、时钟驱动器以及总线导向接收器和发射器的性能和密度。

器件信息<sup>(1)</sup>

| 器件型号          | 封装                     | 封装尺寸（标称值）        |
|---------------|------------------------|------------------|
| SN74AHCT240DB | SSOP (20)              | 7.50mm × 5.30mm  |
| SN74AHCT240NS | SO (20)                | 12.60mm × 5.30mm |
| SN74AHCT240PW | 薄型小外形尺寸封装 (TSSOP) (20) | 6.50mm × 4.40mm  |
| SN74AHCT240DW | SOIC (20)              | 12.80mm × 7.50mm |
| SN74AHCT240N  | PDIP (20)              | 25.40mm × 6.35mm |

(1) 如需了解所有可用封装，请参阅数据表末尾的可订购产品附录。

## 4 修订历史记录

| <b>Changes from Revision M (April 2016) to Revision N</b>                                               | <b>Page</b> |
|---------------------------------------------------------------------------------------------------------|-------------|
| • Added junction temperature to <i>Absolute Maximum Ratings</i> table.....                              | 4           |
| • Moved storage temperature from <i>ESD Ratings</i> table to <i>Absolute Maximum Ratings</i> table..... | 4           |
| • 已更改 the <i>Function</i> table layout.....                                                             | 10          |

| <b>Changes from Revision L (October 2014) to Revision M</b>                                 | <b>Page</b> |
|---------------------------------------------------------------------------------------------|-------------|
| • Changed <i>Handling Ratings</i> table title to <i>ESD Ratings</i> .....                   | 4           |
| • Added –40°C to 85°C to SN74AHCT240 header in <i>Electrical Characteristics</i> table..... | 5           |
| • Added –40°C to 85°C to SN74AHCT240 header in <i>Switching Characteristics</i> table.....  | 6           |

| <b>Changes from Revision K (July 2003) to Revision L</b>                                   | <b>Page</b> |
|--------------------------------------------------------------------------------------------|-------------|
| • 将文档格式更新成了新的 TI 数据表格式。 .....                                                              | 1           |
| • 已删除 订购信息表。 .....                                                                         | 1           |
| • 已添加 将“军用免责声明”添加到 特性 列表。 .....                                                            | 1           |
| • 已添加 应用”.....                                                                             | 1           |
| • Extended operating temperature range to 125°C.....                                       | 5           |
| • Added <i>Thermal Information</i> table .....                                             | 5           |
| • Added –40°C to 125°C for SN74AHCT240 in the <i>Electrical Specifications</i> table. .... | 5           |
| • Added –40°C to 125°C for SN74AHCT240 in the <i>Switching Characteristics</i> table. .... | 6           |
| • 已添加 Detailed Description section. ....                                                   | 10          |
| • 已添加 <i>Application and Implementation</i> section. ....                                  | 11          |
| • 已添加 Power Supply Recommendations and Layout sections. ....                               | 12          |

## 5 Pin Configuration and Functions

### Pin Functions

| PIN  |     | I/O | DESCRIPTION     |
|------|-----|-----|-----------------|
| NAME | NO. |     |                 |
| 1OE  | 1   | I   | Output Enable 1 |
| 1A1  | 2   | I   | 1A1 Input       |
| 2Y4  | 3   | O   | 2Y4 Output      |
| 1A2  | 4   | I   | 1A2 Input       |
| 2Y3  | 5   | O   | 2Y3 Output      |
| 1A3  | 6   | I   | 1A3 Input       |
| 2Y2  | 7   | O   | 2Y2 Output      |
| 1A4  | 8   | I   | 1A4 Input       |
| 2Y1  | 9   | O   | 2Y1 Output      |
| GND  | 10  | —   | Ground Pin      |
| 2A1  | 11  | I   | 2A1 Input       |
| 1Y4  | 12  | O   | 1Y4 Output      |
| 2A2  | 13  | I   | 2A2 Input       |
| 1Y3  | 14  | O   | 1Y3 Output      |
| 2A3  | 15  | I   | 2A3 Input       |
| 1Y2  | 16  | O   | 1Y2 Output      |
| 2A4  | 17  | I   | 2A4 Input       |
| 1Y1  | 18  | O   | 1Y1 Output      |
| 2OE  | 19  | I   | Output Enable 2 |
| VCC  | 20  | —   | Power Pin       |

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                                            |                             | MIN  | MAX            | UNIT |
|--------------------------------------------|-----------------------------|------|----------------|------|
| Supply voltage, $V_{CC}$                   |                             | –0.5 | 7              | V    |
| Input voltage, $V_I$ <sup>(2)</sup>        |                             | –0.5 | 7              | V    |
| Output voltage, $V_O$ <sup>(2)</sup>       |                             | –0.5 | $V_{CC} + 0.5$ | V    |
| Input clamp current, $I_{IK}$              | $V_I < 0$                   |      | –20            | mA   |
| Output clamp current, $I_{OK}$             | $V_O < 0$ or $V_O > V_{CC}$ |      | ±20            | mA   |
| Continuous output current, $I_O$           | $V_O = 0$ to $V_{CC}$       |      | ±25            | mA   |
| Continuous current through $V_{CC}$ or GND |                             |      | ±75            | mA   |
| Junction temperature, $T_J$                |                             |      | 150            | °C   |
| Storage temperature, $T_{stg}$             |                             | –65  | 150            | °C   |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

### 6.2 ESD Ratings

|                                     |                                                                                          | MIN | MAX  | UNIT |
|-------------------------------------|------------------------------------------------------------------------------------------|-----|------|------|
| $V_{(ESD)}$ Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>              | 0   | 1000 | V    |
|                                     | Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup> | 0   | 2000 |      |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                 |                                | SN54AHCT240 |                 | SN74AHCT240 |                 | UNIT |
|-----------------|--------------------------------|-------------|-----------------|-------------|-----------------|------|
|                 |                                | MIN         | MAX             | MIN         | MAX             |      |
| V <sub>CC</sub> | Supply voltage                 | 4.5         | 5.5             | 4.5         | 5.5             | V    |
| V <sub>IH</sub> | High-level input voltage       | 2           |                 | 2           |                 | V    |
| V <sub>IL</sub> | Low-level Input voltage        |             | 0.8             |             | 0.8             | V    |
| V <sub>I</sub>  | Input voltage                  | 0           | 5.5             | 0           | 5.5             | V    |
| V <sub>O</sub>  | Output voltage                 | 0           | V <sub>CC</sub> | 0           | V <sub>CC</sub> | V    |
| I <sub>OH</sub> | High-level output current      |             | –8              |             | –8              | mA   |
| I <sub>OL</sub> | Low-level output current       |             | 8               |             | 8               | mA   |
| T <sub>A</sub>  | Operating free-air temperature | –55         | 125             | –40         | 125             | °C   |

(1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. See the [Implications of Slow or Floating CMOS Inputs application report](#).

### 6.4 Thermal Information

| THERMAL METRIC <sup>(1)</sup> |                                              | SN74AHCT240 |         |         |         |         | UNIT |
|-------------------------------|----------------------------------------------|-------------|---------|---------|---------|---------|------|
|                               |                                              | DW          | DB      | N       | NS      | PW      |      |

## 8 Parameter Measurement Information

Unless otherwise noted, all input pulses are supplied by generators having the following characteristics:

- $PRR \leq 1 \text{ MHz}$
- $Z_O = 50 \Omega$
- $t_r \leq 3 \text{ ns}$
- $t_f \leq 3 \text{ ns}$

### 注

All parameters and waveforms are not applicable to all devices.

- (1)  $C_L$  includes probe and jig capacitance.
- (2) The outputs are measured one at a time, with one transition per measurement.

## 9 Detailed Description

### 9.1 Overview

The SN74AHCT240 devices are organized as two 4-bit buffers/line drivers with separate output-enable ( $\overline{\text{OE}}$ ) inputs. When  $\overline{\text{OE}}$  is low, the device passes inverted data from the A inputs to the Y outputs. When  $\overline{\text{OE}}$  is high, the outputs are in the high-impedance state. To ensure the high-impedance state during power up or power down,  $\overline{\text{OE}}$  should be tied to  $V_{\text{CC}}$  through a pull-up resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

### 9.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

### 9.3 Feature Description

- $V_{\text{CC}}$  is optimized at 5 V
- Allows up-voltage translation from 3.3 V to 5 V
  - Inputs accept  $V_{\text{IH}}$  levels of 2 V
- Slow edge rates minimize output ringing
- Inputs are TTL-voltage compatible

### 9.4 Device Functional Modes

**表 2. Function Table**  
(Each 4-bit Inverting Buffer/Driver)

| INPUTS                 |   | OUTPUT<br>Y |
|------------------------|---|-------------|
| $\overline{\text{OE}}$ | A |             |
| L                      | H | L           |
| L                      | L | H           |
| H                      | X | Z           |

## 10 Application and Implementation

### 注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 10.1 Application Information

The SNx4AHCT240 device is a low-drive CMOS device that may be used for a multitude of bus interface type applications where output ringing is a concern. The low drive and slow edge rates will minimize overshoot and undershoot on the outputs. The input switching levels have been lowered to accommodate TTL inputs of 0.8-V  $V_{IL}$  and 2-V  $V_{IH}$ . This feature makes the SNx4AHCT240 device ideal for translating up from 3.3 V to 5 V. [图 8](#) shows this type of translation.

### 10.2 Typical Application

图 8. Application Diagram

#### 10.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Care should be taken to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads; therefore, routing and load conditions should be considered to prevent ringing.

#### 10.2.2 Detailed Design Procedure

1. Recommended Input Conditions:
  - For rise time and fall time specifications, see  $\Delta t/\Delta V$  in the [Recommended Operating Conditions](#) table.
  - For specified high and low levels, see  $V_{IH}$  and  $V_{IL}$  in the [Recommended Operating Conditions](#) table.
  - Inputs are overvoltage tolerant, allowing them to go as high as 5.5 V at any valid  $V_{CC}$ .
2. Recommend Output Conditions:
  - Load currents should not exceed 25 mA per output and 75 mA total for the part.
  - Outputs should not be pulled above  $V_{CC}$ .

## Typical Application (接下页)

### 10.2.3 Application Curves

图 9. Application Scope Capture

## 11 Power Supply Recommendations

The power supply can be any voltage between the MIN and MAX supply voltage rating located in the [Recommended Operating Conditions](#).

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1  $\mu\text{F}$  capacitor is recommended. If there are multiple  $V_{CC}$  terminals then 0.01  $\mu\text{F}$  or 0.022  $\mu\text{F}$  capacitors are recommended for each power terminal. It is ok to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1  $\mu\text{F}$  and 1.0  $\mu\text{F}$  capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for the best results.

## 12 Layout

### 12.1 Layout Guidelines

When using multiple bit logic devices, inputs should not float. In many cases, functions or parts of functions of digital logic devices are unused. Such examples are when only two inputs of a triple-input AND gate are used, or only 3 of the 4-buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states.

Specified in 图 10 are rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or  $V_{CC}$ , whichever makes more sense or is more convenient. It is acceptable to float outputs unless the part is a transceiver. If the transceiver has an output enable pin, it will disable the outputs section of the part when asserted. This will not disable the input section of the I/Os so they also cannot float when disabled.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF SN54AHCT240, SN74AHCT240 :**

- Catalog : [SN74AHCT240](#)
- Automotive : [SN74AHCT240-Q1](#), [SN74AHCT240-Q1](#)
- Military : [SN54AHCT240](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects
- Military - QML certified for Military and Defense Applications

SCALE: 10X

SOLDER MASK DETAILS

4214851/B 08/2019

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

## EXAMPLE STENCIL DESIGN

DB0020A

SSOP - 2 mm max height

SMALL OUTLINE PACKAGE

SOLDER PASTE EXAMPLE  
BASED ON 0.125 mm THICK STENCIL  
SCALE: 10X

4214851/B 08/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

4040083/F 03/03

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. This package is hermetically sealed with a ceramic lid using glass frit.
  - D. Index point is provided on cap for terminal identification only on press ceramic glass frit seal only.
  - E. Falls within MIL STD 1835 GDIP1-T14, GDIP1-T16, GDIP1-T18 and GDIP1-T20.

PW (R-PDSO-G20)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
  - D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
  - E. Falls within JEDEC MO-153

PW (R-PDSO-G20)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate design.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

| MS-001<br>VARIATION | AA               | BB               | AC               | AD               |

4040049/E 12/2002

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
  - D. The 20 pin end lead shoulder width is a vendor option, either half or full width.

## NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.43 mm per side.
5. Reference JEDEC registration MS-013.
